Visual studio code

PROJECTS

Foody.com is web page design using HTML, CSS and Java Script

Our website provides information, knowledge and it show our Indian culture to Proposing an efficient Online Food Delivery System with user-friendly interface, real-time updates, customizable orders, and seamless order processing, optimizing customer experience and staff efficiency while minimizing errors.

Configure A Network Using OSPF in Packet Tracer

To achieve end device security, high availability, scalability and more throughput.

This project aims to configure a basic OSPF (Open Shortest Path First) network using Cisco Packet Tracer. OSPF is a dynamic routing protocol commonly used in large-scale networks due to its scalability and fast convergence properties.
