Ghanshyam V

Python Developer (5.5+ years)

Experience

- ➔ Results-driven software engineer with 5+ years of experience in API backend development, data processing, and web automation. Expertise in designing and implementing scalable microservices, building event-driven architectures, and developing high-performance data pipelines. Proficient in web scraping, real-time data acquisition, and automation using Python, Django, Selenium, and cloud technologies. Strong collaborator with cross-functional teams, ensuring seamless integration and efficient system performance.

Skills

- Python, Node.js, Express API, Django, FastAPI, pandas, scrapy, selenium, Docker, kubernetes, AWS(SQS, S3, Lamda, Api gateway), kafka, Redis, RabbitMQ, data processing, Prometheus, Grafana, MySql, MongoDB

Languages:- English (working proficiency), Hindi

Education

BE - Apollo Institute of Engineering And Technology, Ahmedabad

Work Experience

Real-time User Data Acquisition

Overview

Developed a microservice for the product backend that captures real-time user data with authentication, takes username, password, and OTP/MFA as input. The service automates browser navigation, extracts user-related data, processes it, and stores it in a database.

Roles & Responsibilities:

- ➔ Designed and developed a high-volume, scalable system for real-time authentication data acquisition.
- ➔ Ensured seamless communication within cross-functional teams, including developers and business stakeholders.
- ➔ Built automation for browser navigation and data extraction using headless browsers.

Technology

- ➔ Python, Node.js, Microservices, Selenium/Puppeteer, Django, Docker, Kubernetes, SQS/RabbitMQ, MySQL

Data Intelligence and Insights

Overview

Developed a microservice-based, event-driven product backend that collects intelligence from social media platforms. The system processes user-defined parameters such as social media account URLs and keywords, gathers relevant insights, and stores the processed data in a database.

Roles & Responsibilities:

- ➔ Designed and developed the backend infrastructure for data intelligence.
- ➔ Led a team of developers and collaborated with cross-functional teams.
- ➔ Worked closely with the CTO, DevOps, and product teams to drive the product lifecycle from inception to MVP and beyond.

Technology

- ➔ Python, Django, Microservices, Selenium/Puppeteer, Docker, Kubernetes, SQS, MySQL, Prometheus, Grafana

eCommerce Data Processing

Overview

Developed a distributed data processing pipeline in Python to extract, process, and load eCommerce data based on event triggers.

Roles & Responsibilities:

- ➔ Designed and implemented event-driven data pipelines for large-scale eCommerce data processing.
- ➔ Developed Python-based ETL processes for efficient data extraction and loading.
- ➔ Collaborated with DevOps and machine learning teams for seamless integration.

Technology

- ➔ Python, Pandas, Scrapy, SQS, S3, RDS, AWS Lambda, Docker

RESTful API Scraping

Overview

Developed API scrapers that collect data from specified websites, standardize the extracted data, and return it in a well-defined schema.

Technology

- ➔ Python, Django, MySQL, ProxyIP
